Time Meeting
June 14th, 2016

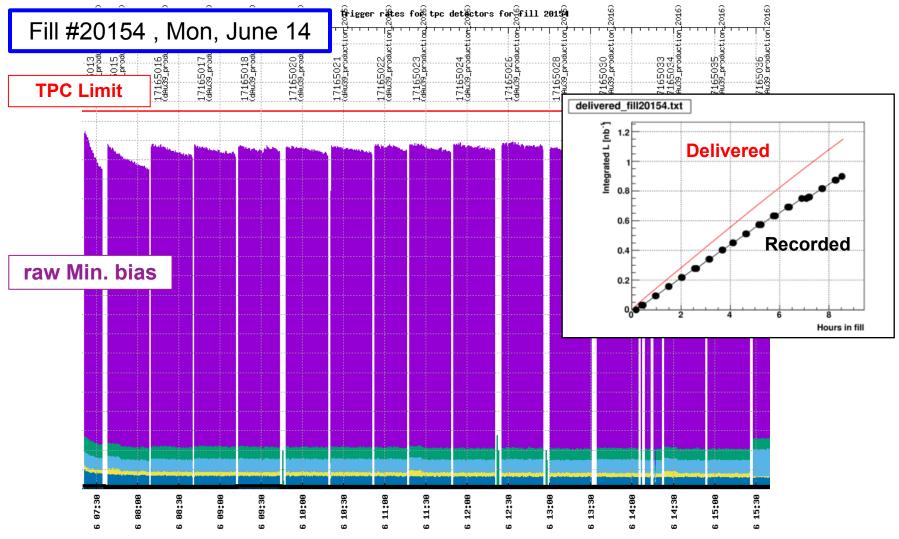

## Operation Efficiency

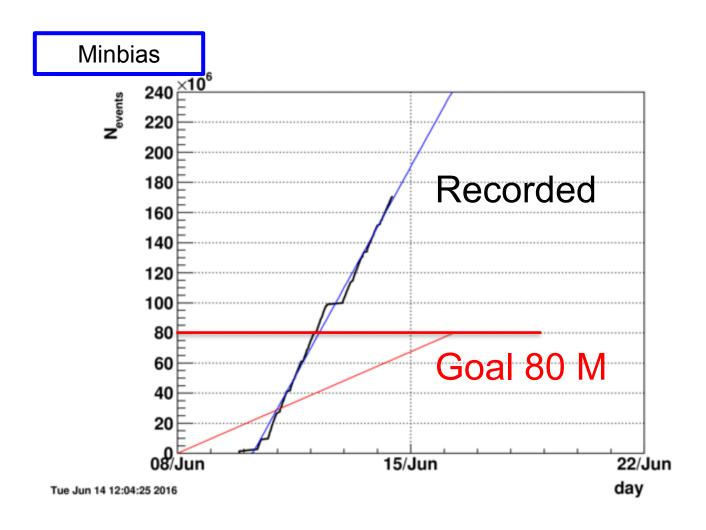

- Quick operation of detectors by shift crews
- Very good operation efficiency >86 %!!

## d+Au 39 GeV Sampled Luminosity

• STAR DAQ system runs stably

## d+Au 39 GeV Sampled Luminosity

• STAR has currently accumulated 212% of our goal

## Preparation for Au+Au 200 GeV

- STAR is changing it's Trigger bandwidth allocation for the continuation of the 200 GeV AuAu running to concentrate on trying to reach as much of the HFT min-bias event goal as possible.
- We are ready for the transition, and hope with this final running to reach 90+% of our 2 B mb event goal (currently at 1.5 B evt).
